## About me:

Hello! My name is Denys, I am 21 years old, a frontend developer from Odesa. Currently, I live in Krakow, Poland. I have been creating user interfaces for more than 5 years with a focus on clean, structured code and high-quality UI. My journey in web development started at the age of 14 when I attended my first courses, and since then I have been continuously improving in this field.

I work with technologies such as HTML, CSS (including preprocessors), JavaScript, and TypeScript. I also have experience with build tools – Gulp and some Webpack. My current goal is to move to the next level and work full-time with React/Next.js in a team environment, contributing to projects from idea to production.

Clean and understandable code with good structure is essential to me, as well as adding comments where they are truly needed. I value well-designed UI, teamwork, and a shared vision of the product within the team.

Outside of coding, I am passionate about sports: I enjoy football, boxing, and table tennis. Active games and sports with friends are always a “yes” for me!

## Experience and projects:

### 2020 - Present

- Developed numerous responsive websites and landing pages from scratch, focusing on clean structure and scalability.
- Converted Figma designs into pixel-perfect interfaces using HTML, SCSS, JavaScript, and later TypeScript.
- Integrated APIs via Axios and RTK Query, worked with forms, validation, and UI feedback logic.
- Used Git for version control and deployed projects to Vercel.
- Built web applications with React and Next.js, applying Redux Toolkit and Tailwind CSS.
- Optimized application performance with memoization, efficient rendering of large lists, and lazy loading.

### Selected projects:

- **GameHub** - Next.js + TypeScript + Redux Toolkit + RTK Query + Tailwind CSS + Swiper: a web application with a game catalog, filters, and sliders. Built a custom database from scratch and implemented API endpoints with Next.js. Integrated Google authentication (NextAuth) with user data stored in the database to synchronize likes across different devices. Additionally, implemented review likes using LocalStorage. [Demo Link](#)
- **Crypto Dashboard** - React + Tailwind + Chart.js + React Router: dynamic crypto asset tracking dashboard, connection of all popular crypto wallets, coinstats API, Binance API, react-hook-form, react-router and much more. [Demo link](#)

## Skills:

- HTML
- CSS
- SASS
- BEM
- Tailwind
- Javascript
- Typescript
- Next.js
- React
- React Router
- React hooks
- React hook form
- Zod
- Axios
- React Query
- Redux
- Redux-toolkit
- Next Auth
- SQL
- PostgreSQL
- Vite
- Gulp
- Git
- Figma
- Node js
- Telegram BOT
