About me:

Hello! My name is Denis, I am 21 years old, I am a front-end developer from the city of Chornomorsk, Odesa region, Ukraine. For over 4 years I have been creating interfaces with a focus on clean, structured code and high-quality UI. My journey in web development began at the age of 14, when I took my first courses, and since then I have continued to improve in this direction.

I work with technologies such as HTML, CSS (including preprocessors), JavaScript and TypeScript. I also have experience with build tools - Gulp and a little Webpack. Now my goal is to reach the next level and fully work with React in a team, where I can participate in the project from idea to production.

It is important for me that the code is clean and understandable, with a good structure and comments where it is really necessary. I value good UI, teamwork and a common vision of the product in the team.

Outside of coding, I'm into sports: I love football, boxing, and table tennis. Gyms are not my thing, but active games and sports with friends are always welcome!

Particularly interesting projects related to finance and cryptocurrencies are an area in which I have a special interest and want to develop as a developer.

Experience and projects:

2020 - Today

- Created many responsive sites and landing pages from scratch, emphasizing clean structure and scalability.
- Translated layouts from Figma into pixel-perfect interfaces using HTML, SCSS, JavaScript, and later TypeScript.
- Integrated API via Axios, worked with forms, validation, and UI feedback logic.
- Used Git for version control and deployed Vercel projects (While learning next.js).

Вибрані проекти:

- Crypto Dashboard — React + Tailwind + Chart.js + React Router: dynamic crypto asset tracking dashboard, connection of all popular crypto wallets, coinstats API, Binance API, react-hook-form, react-router and much more. [GitHub link](#)

Навички:

- HTML
- CSS
- SASS
- BEM
- Tailwind
- Javascript
- Typescript
- React
- React Router
- React hooks
- React hook form
- React Query
- Zod
- Axios
- Redux
- Redux-toolkit
- Vite
- Gulp
- Git
- Figma
- Node js
